KYSSE™

Goes Further

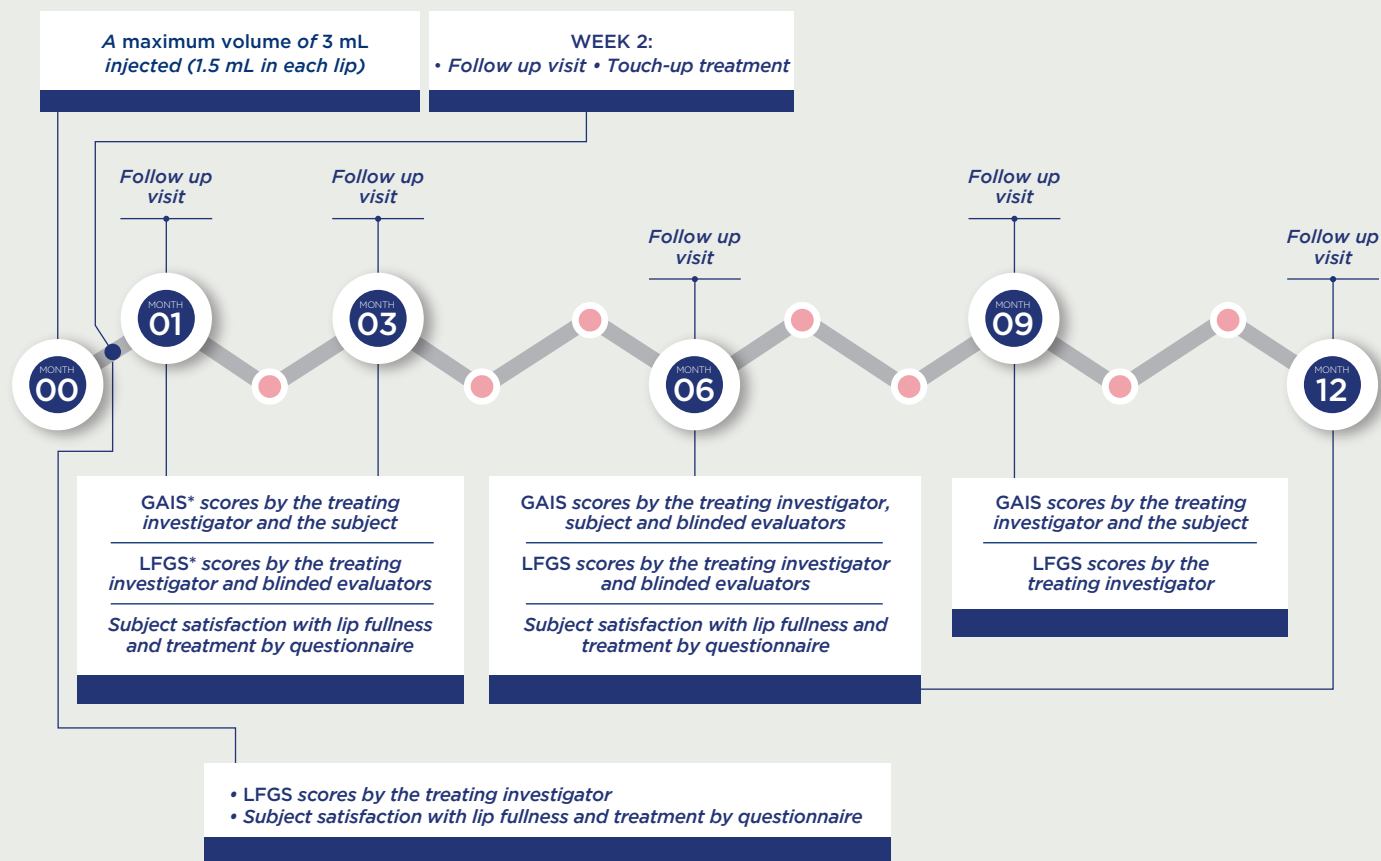

*Results from a randomized,
evaluator-blinded, comparative
study of the safety and
efficacy of lip injections with
Restylane® Kysse™ and
Juvederm Volbella*

PART OF THE GALDERMA
AESTHETICS COLLECTION

GALDERMA

STUDY DESIGN¹

At baseline, **60 subjects** were randomized 1:1 to treatment with either **Restylane Kysse™** or Juvéderm Volbella.

Natural look

100%

100% of the subjects were satisfied with natural looking lips after 12 months when treated with Restylane Kysse.¹

86%

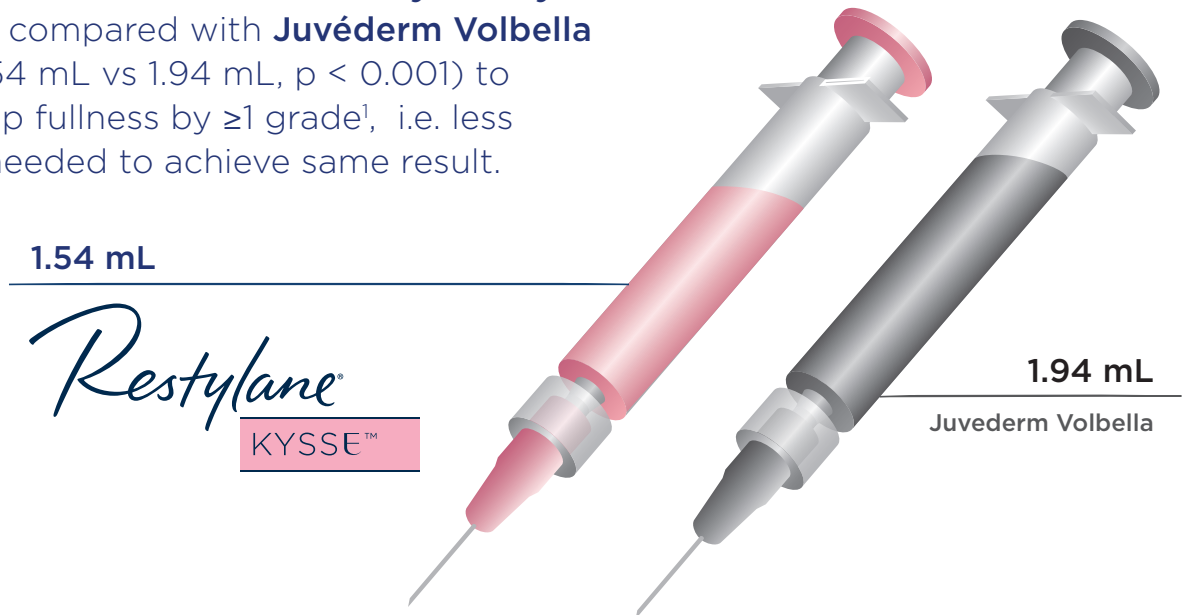

86% of the subjects felt more attractive after treatment with Restylane Kysse.¹

96%

treated with **Restylane Kysse™** would do the treatment again.¹

LESS PRODUCT NEEDED TO ACHIEVE SAME RESULT

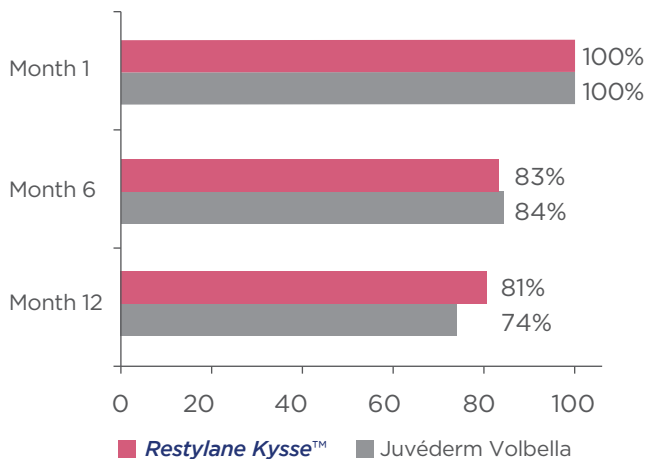

A significant lower volume of **Restylane Kysse** is needed compared with **Juvéderm Volbella** (mean: 1.54 mL vs 1.94 mL, $p < 0.001$) to improve lip fullness by ≥ 1 grade¹, i.e. less product needed to achieve same result.

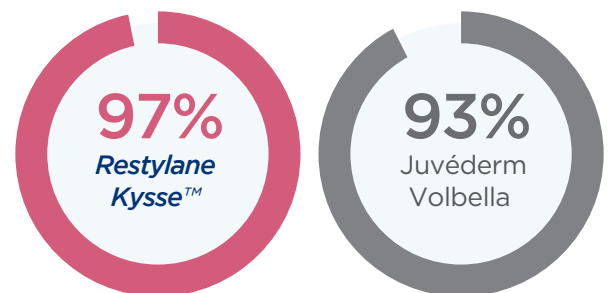

100% IMPROVEMENT

Assessment by GAIS*¹:

Improved subjects (%)

Assessment by LFGS*¹:

Lip fullness (LFGS) in both treatment groups was improved at one month after injection as reported by treating investigators.¹

Subjects and treating investigators reported 100% improvement in both treatment groups in the first month (GAIS)¹. Subjects also reported the improvement to remain throughout the 12 months.¹

Achieve REFINED

LOOKS THAT LAST
